PROFESSIONAL SUMMARY

Backend and DevOps-focused Software Engineer with 4+ years building production systems across fintech, edtech, proptech, and healthtech, with end-to-end full-stack delivery from schema to interface. Sole engineer behind an 88,000-line Go microservice platform spanning 12 services and a 76-table PostgreSQL schema. Ships in Go, TypeScript/Node.js, and Python, with Rust and C#/.NET at project depth. Specializes in correctness under concurrency: idempotent payment rails, audited ledgers, and oversell-proof inventory. Builds AI-enabled applications, integrating LLMs, RAG, and agentic workflows into production backends. Certified Kubernetes Administrator running Terraform-provisioned infrastructure on AWS and GCP. Owned two products through to launch as sole backend engineer, integrated a bank payment gateway single-handedly, and contributes security fixes to major open-source Go frameworks.

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript, Python, SQL, Rust, C#/.NET, Bash

Backend & APIs: Go (Fiber, Gin, net/http), Node.js (NestJS, Fastify, Express), Python (Flask, FastAPI), Rust (Axum), C#/.NET (ASP.NET Core, EF Core), gRPC, REST, GraphQL, WebSocket

Frontend: React, Next.js, TypeScript, Zustand, TanStack Query, Tailwind CSS, shadcn/ui, Progressive Web Apps

Cloud & Infrastructure: AWS (Lambda, EKS, EC2, S3, RDS, CloudHSM, IAM, API Gateway, CloudWatch), GCP (Cloud Run, Cloud SQL, PubSub, Cloud Build), Docker, Kubernetes, Terraform

Data & Messaging: PostgreSQL (schema design, indexing, transactions, row-level and optimistic locking), Redis, MongoDB, DynamoDB, Supabase, Apache Kafka, GCP PubSub, asyncq

DevOps & Observability: CI/CD (GitHub Actions, Cloud Build), Sentry, Prometheus, CloudWatch, Infrastructure as Code, container hardening

AI & Machine Learning: LLM integration, Retrieval-Augmented Generation (RAG), vector databases, agentic architectures and workflows, natural-language interfaces, dataset creation for automation and analysis

Engineering Focus: Microservices, Event-Driven & Distributed Systems, Multi-Tenant RBAC, Idempotency, Concurrency Control, Ledger Design, Payment Integrations

CERTIFICATIONS

Certified Kubernetes Administrator (CKA), Linux Foundation • AWS Certified Solutions Architect, Associate (In Progress) • Agentic AI Fundamentals: Architectures, Frameworks, and Applications • OpenAI API & Fine-Tuning

PROFESSIONAL EXPERIENCE

Software Engineer (Full-Stack, Cloud Infrastructure & DevOps) | Dwelix

Dec 2025 to Present

Lagos, Nigeria • Hybrid • Full-time • Proptech • Sole engineer

- Architected 12 Go microservices and an API gateway, each independently containerized and running on GCP Cloud Run, communicating over gRPC with PubSub event streaming
- Shipped and maintain the entire backend: 88,000 lines of Go across 125 packages, as the platform's sole engineer from an empty repository
- Modelled a 76-table PostgreSQL schema across 130 versioned migrations spanning payments, KYC, escrow, key custody, and dispute resolution
- Delivered a React and TypeScript frontend of 132 pages and 353 components across 6 role-based dashboards using Zustand, TanStack Query, Tailwind, and shadcn/ui
- Implemented a webhook-driven reconciliation flow where Paystack callbacks transition transaction state and mismatches are automatically flagged; provisioned the full GCP stack with Terraform and CI/CD across dev, staging, and production

Backend Software Engineer (Node.js & TypeScript) | Schole Labs

Mar 2026 to Jul 2026

Lagos, Nigeria • Contract • Multi-Tenant Edtech SaaS • Sole backend engineer

- Owned the entire backend for a multi-tenant school management platform in TypeScript with NestJS, Fastify, and Node.js, taking it from development through to product launch
- Wrote the RESTful APIs and domain services powering student grading, bulk enrollment, performance data, and staff portal management

- Enforced multi-tenant role-based access control isolating data and permissions across administrators, staff, and student records

Senior Software Engineer (Backend, Payments & DevOps) | MyDevConnect / PCXPay

Sep 2025 to Jan 2026

Remote · Contract · FCA-Regulated Global Fintech · pcxpay.com

- Integrated the GTBank Squad payment gateway single-handedly, coordinating directly with GTBank engineers from technical scoping through production cutover, owning reconciliation, idempotency, and gateway-specific error handling
- Deployed AWS Lambda microservices in Python with Terraform-managed infrastructure for cross-border payments across UK, Nigerian, and Canadian banking rails
- Operated live settlement systems across multiple banking partners under FCA scrutiny; debugged ClearBank and CloudHSM issues and instrumented the fleet with Sentry distributed tracing
- Collaborated within a 15 to 30 engineer team across 4 countries on a platform that spun out as an independent FCA-regulated money transfer operator serving partners including GTBank, Nvidia, and AB InBev

Software Engineer, Technical Lead (Full-Stack) | Mopcare

Jan 2022 to Present

Remote · Part-time · Healthtech

- Direct backend development for a digital health platform (LMS, CMS, VMS) serving close to 2,000 elderly patients, running Go microservices with PostgreSQL, Redis caching, and role-based access control
- Extended the platform full-stack with React and TypeScript portals using Zustand, TanStack Query, Tailwind, and shadcn/ui; migrated legacy services from Rust to Go for maintainability
- Manage Terraform-provisioned AWS infrastructure with Docker and CI/CD via GitHub Actions; mentor engineers and set engineering standards

OPEN SOURCE

Contributions to major Go projects | gofiber/fiber, gin-gonic/gin, go-resty/resty | Combined 140K+ GitHub stars

- Submitted a security patch to Fiber's logger middleware sanitizing user-controlled tag values to prevent CRLF log-injection; implemented allocation-free sanitization helpers across 15+ log tag functions

glideapi | Ergonomic Rust web framework, authored | Rust · FastAPI-style DX, Actix-level performance

- Authoring a Rust web framework that pairs FastAPI-style developer ergonomics with the performance characteristics of Actix

SELECTED ENGINEERING PROJECTS

Akin | Pooled-fund wallet ledger, live in production | Go, Fiber, PostgreSQL, Redis, Paystack, React PWA

- Engineered a wallet ledger with pessimistic row locking guaranteeing zero double-spend across concurrent disbursements; 12,400 lines of Go with a complete audit trail

Corvus | Stateful network security scanner | Go, Next.js, bbolt, WebSocket, NaCl mesh

- Versions every host and port observation as a time series with sub-second delta detection; goroutine worker pools scan hosts concurrently, with a natural-language query interface over live scan data; 11,500 lines of Go across 30 packages

Additional: go-payroll-engine (idempotent disbursement engine, Bloom-filter dedup) · Fleetform (Rust IaC engine with toposort dependency DAG) · BuKr (Go/Rust ticketing, oversell-proof under load) · ERA (Terraform, Kubernetes, Kafka cloud-native transformation) · ProductCatalogAPI (.NET/EF Core)

EDUCATION

BSc, Anatomy | Olabisi Onabanjo University, Ago-Iwoye, Nigeria

2018 to 2023
